EDUCATION

- **Southern University of Science and Technology** Shenzhen, China
Bachelor of Engineering in Computer Science Sept. 2015 - Jun. 2019
 - GPA: Major: 3.7/4.0 (88.3/100, Rank 10/98); Cumulative: 3.5/4.0 (85.8/100)
 - Honors: Outstanding Student Scholarship (2017, 2018); Freshman Scholarship (2015)
- **University of California, Berkeley** Berkeley, CA
Semester Exchange Student Jun. 2017 - Aug. 2017
 - CS61A (The Structure and Interpretation of Computer Programs)
 - CS61BL (Data Structures and Programming Methodology)

PROFESSIONAL EXPERIENCE

- **Microsoft** Beijing, China
Software Engineer, Experiences + Devices Group Jul. 2018 - Sept. 2018
 - Created the first Edge explorer version based on iOS 12, deployed 8 Siri Shortcuts within the Edge app including instant headline news and photo recognition searching. The application was selected for promotion Shortcuts feature in Apple's App Store
 - Assisted in completing the pop-up hover video window, face/touch ID app locking, intelligent bookmark labeling, and extended spotlight widgets features with other FTEs
 - Organized an intern team to join the Microsoft Hackathon that developed a real-time analyses app to add people's name-tag in user's vision and won the participation award

RESEARCH EXPERIENCE

- **Image Features Extraction**
Research Intern, Advisor: Dr. Qiang Qu (Chinese Academy of Sciences) Sept. 2018 - Oct. 2018
 - Used Selenium, Scrapy, and BeautifulSoup to collect training images and binary data into a self-designed MySQL database; achieved the data cleaning and reduction process needed for the research project
 - Implemented a fast, high-performance patch-level CNN and SVM classifier for a more efficient image feature recognition platform; readjusted algorithm and parameters to obtain more than over 95% precision
- **Fake News Detector Based on Machine Learning**
Research Intern, Advisor: Dr. Mike Tamir (UC Berkeley) Jan. 2018 - Mar. 2018
 - Used US political news dataset and create a detector to analyze the authenticity and achieve visualization
 - Designed the pipeline of the machine learning process including splitting the raw documents and reassigning the weights
 - Accomplished majority of work including hyper-tuning the base model and classifiers, mixing the XGBoost model with Word2Vec and Doc2Vec well ahead of deadline resulting in a detector with over 93% accuracy

PROJECT EXPERIENCE

- **Multi-user Data Labeling Platform** *Back-end Engineer, Yimian Corp.* Apr. 2018 - Jun. 2018
 - Deployed the whole back-end system based on Flask framework and provided several interfaces for websites to invoke; implemented auto decompression, distribution and storing functions for data
 - Implemented interaction feature between backend and database; assisted with the construction and CURD methods of the database; assisted in designing fault-tolerant algorithm
- **Social network analysis and visualization** *Front-end Engineer, ICSE contest* Oct. 2017 - Dec. 2017
 - Completed the front-end code compiling work, designed the layout of the entire website, reconstructed the climber program and improved the performance of the filter module
 - Assisted with the construction of the back-end framework and calls to the database

MISCELLANEOUS

- **Awards:** Interdisciplinary Contest in Modeling, Meritorious Winner (Top 10%)
China Undergraduate Mathematical Contest in Modeling, Second Prize (Top 10%)
- **Teaching:** Student teaching assistant of SUSTech course CS203 (Data Structure and Algorithm) and CS209 (Computer System Design and Application)
- **Skills:** Front-end, data mining, Python, Java, Flask/Django, SPSS, C/C++, MySQL, Swift
- **Languages:** English (Fluent, TOEFL 105, GRE 153+170+3), Chinese (Native)
